THE MOBIADO 712 STEALTH LIMITED EDITION: EXTREME MOBILITY

Vancouver, Canada – May 26th, 2011: Mobiado announces the launch of its new model, the 712 Stealth Limited Edition, produced in limited quantity of 777 pieces.

In search of inspiration we turned our attention to Stealth aircraft. Outstanding technical specifications of these spy planes have helped us discover a new design language. Total black colour, perfect combination of anodized aluminum frame and signature sapphire crystal plates. Thus engineering inspiration have created the new aesthetics of the Mobiado Stealth series. Each detail is deliberately thought out – leaving no room for unnecessary details. The side body edges are notched to enable a secure hold of the phone when wearing gloves. Any equipment is first of all a practical tool. That's why there are no excessive decorative components, every detail is functional and austere, just as strict and flawless as a secret agent.

Technologies: Naturally, a Secret Agent's Equipment is Incomplete without the Most Advanced Technology

Stealth series mobile phones owe their style to the Stealth aircraft. The frame is created from aircraft aluminum - providing the necessary degree of durability and rigidity while still remaining light. To produce an evenly matte texture the surface is created with a fine glass-bead blaster, and then anodized to obtain a hard ceramic black wear resistant coating. 179-carat sapphire crystal plates are then immaculately inset into the aluminum. The buttons created from sapphire crystal and hand painted black from underneath. The screws are crafted from gunmetal black stainless steel. The iconic Mobiado logo is CNC machine engraved into the body to bestow a final touch of elegance.

The Internals: Merging state-of-the-art technologies with the tradition of phone-making innovation.

The 712 Stealth is unlocked and will work with any GSM network operator. The phone is quad-band GSM (GSM 850/900/1800/1900) and has triple band WCDMA Band I, II and VIII (2100/1900/900) coverage on up to five continents. It is equipped with a large 2.2" QVGA display, 5 megapixel camera and video camera with flash, integrated GPS, web browser, email support, and a music player that supports AMR, MID, MP3, MP4, M4A, .WMA and AAC files.
