

MOBIADO LAUNCHES THE PROFESSIONAL COLLECTION: UNIQUE. ELEGANT. ADVANCED.

Vancouver, Canada - December 15th, 2004: Mobiado, a luxury mobile phone company, was founded for the single purpose of designing and developing the finest, most technologically advanced mobile phones. Today, Mobiado announces the launch of Mobiado Professional; the first and only CNC machined mobile phone.

Mobiado Professional is a mobile phone that is luxurious by design but is also solid and strong for demanding everyday use. It is created from aircraft aluminum to build a strong yet light body, silicone carbide polished, and then anodized to produce a ceramic surface for the toughest of uses. The buttons are stainless steel and the screens are abrasive resistant cast acrylic. The design was not to build a phone of precious metals that would wear and scratch, but to use the best materials for the best results. Mobiado Professional is available in six designer colors.

Mobiado built the most luxurious mobile phone without compromising technology. Mobiado Professional is unlocked and tri-band GSM network operational. It works within North America, Europe, Africa, Asia- Pacific, and South America where EGSM 900, GSM 1800, and GSM 1900 networks are available. Mobiado Professional is equipped with a video recorder and player, digital VGA camera, active TFT color display, Bluetooth wireless technology, speaker phone, streaming video and audio, music player for MP3 and AAC files, and two illumination white LEDs.
